PROFESSIONAL SUMMARY

Full Stack Developer skilled in building scalable web applications using the MERN stack. Experienced in developing RESTful APIs, implementing secure authentication, and designing responsive user interfaces. Strong foundation in Data Structures, Algorithms, and System Design with a focus on clean architecture and performance optimization.

EDUCATION

Acharya Nagarjuna University

Bachelor of Technology in Artificial Intelligence and Machine Learning

Guntur, AP

2022 – 2026

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+)

Frontend Development: React.js, HTML5, CSS3, TailwindCSS, React Router

Backend Development: Node.js, Express.js, REST API Design

Databases: MongoDB, MySQL

Core Concepts: Data Structures and Algorithms, OOP, System Design Basics

Developer Tools: Git, GitHub, VS Code, Vercel, Render, Postman

Other Skills: JWT Authentication, API Integration, Debugging, Performance Optimization

PROJECTS

FlowTrack – Real-Time Workflow Management System | *MERN Stack*

GitHub

- Built a task and workflow management application for team collaboration
- Developed RESTful APIs for task creation, tracking, and comments
- Designed system structure to support real-time updates and interactions
- Optimized MongoDB queries using indexing for better performance
- Designed a modern, responsive UI using React and Tailwind CSS for a smooth user experience.
- Designed scalable backend architecture for task and workflow management
- Implemented secure authentication system with protected routes ensuring access only for logged-in users.

PrepAI – AI-Powered Career Assistant | *MERN Stack*

GitHub

- Developed a full-stack web application (MERN stack) to assist job seekers with resume analysis, interview preparation, and resource discovery.
- Integrated AI-based features to generate ATS scores, provide resume feedback, and simulate real interview questions with evaluation.
- Built REST APIs using Node.js and Express, and managed data using MongoDB, Integrated external AI APIs (e.g., Gemini/OpenAI alternatives) for intelligent content generation.
- Designed a modern, responsive UI using React and Tailwind CSS for a smooth user experience.
- Implemented secure authentication system with protected routes ensuring access only for logged-in users.

Dataverse – Dataset Discovery Platform | *Full Stack*

GitHub

- Built a full-stack web application to simplify dataset discovery and preparation for machine learning and deep learning projects, reducing time spent sourcing data.
- Developed RESTful APIs to fetch, filter, and manage a dataset catalogue, with support for file downloads, external link referencing, and auto-generated Scikit-learn code snippets
- Integrated dataset cleaning and preprocessing features directly into the platform, enabling users to prepare data for ML workflows without switching tools.

ACHIEVEMENTS

- Solved 200+ Data Structures and Algorithms problems on competitive coding platforms, demonstrating strong problem-solving and algorithmic thinking skills.
- Strong understanding of **system design fundamentals**, Participated in technical discussions, hackathons, and coding contests
